

HTTP API & Product Feed

This topic explains how to import your **Product Feed** via our **HTTP API**. Import via HTTP API is used when the XML Product Feed option is unavailable.

Product Feed is used as a product database for the items displayed in **Product Recommendations**. Keeping your feed in constant sync with REES46 significantly improves performance of **Product Recommendations**.

This topic covers the following:

[Menu tree on the right](#) | [Return to the main page](#)

Table of Contents

Support and Assistance

If you encounter any problems (for example, when some functions do not work properly even if you followed all provided instructions), contact us at support@rees46.com

Our support service will help you resolve the issue.

TIP

You don't need to read this topic if you are a user of our [XML Product Feed](#) option.

ATTENTION

By default, unauthorized HTTP request are rejected by our servers.

To use the HTTP requests feature, please first contact us at support@rees46.com, so we can whitelist your account.
