

Activate Subscription Buttons

Important

Do not test Web Push notification functionality in incognito windows of any browser. You cannot use Web-push notifications in the incognito mode.

Table of Contents

This topic helps you activate Web Push subscription buttons on your website. If the visitor blocked your **Subscription Form**, the form will no longer appear. However, you can use the subscription buttons to prompt the visitor to subscribe again.

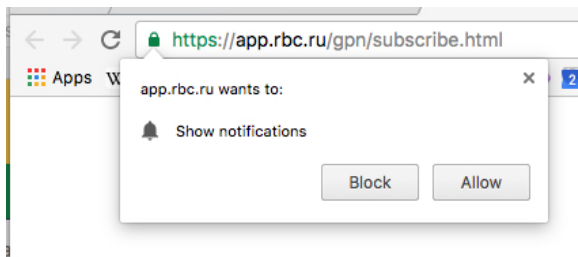

To activate the subscription buttons

- Embed into selected page of your website a link or a button of the `rees46-web-push-subscribe-button` CSS-class .

To clarify, consider the following example:

```
<a class='rees46-web-push-subscribe-button'>Notify me about current status of my order</a>
```

REES46 automatically finds all similar elements on your page and activates **Web Push Subscription Form** upon clicking these elements:

NOTE

If the visitor has already subscribed to Web Push notifications, REES46 will hide all buttons of the `rees46-web-push-subscribe-button` CSS-class .
